- Abstract -

Turkey having a mixed economic system where state and private enterprises both used to have a role in economy, urged to move to a new economic order favoring a market economy in early 1980s under the effect of domestic and global factors. In order to realize high economic growth she needs to keep pace with other outside players in technological progress. At the next step, to get to the right place in a world evolving from industrial to information societies Turkey also have to be qualified and progressive in information technologies where she already is a leader in her region.
